

## Data Curation solution

# Accurate™

**Accurate™ combines data curation and automated ontology mapping functions to efficiently curate clinical and phenotypic datasets and ontologize. With Accurate you can save time and resources in the curation and ontology mapping processes, with immediate reductions of up to 75% in time spend.**

Accurate provides a framework for organizational curation rules and workflows, ensuring standard practices in the curation process across teams in different locations, with smart memory and learning built-in.

## With Accurate you can...

Explore your data in a quick glance right from the start

Apply intuitive data cleanup functions to (bulk) edit entries

Automatically map clinical terms to selected ontologies or controlled vocabularies

Use artificial intelligence and machine learning-based proprietary algorithms

Curate datasets in multiple languages

Use the ontologies of your choice

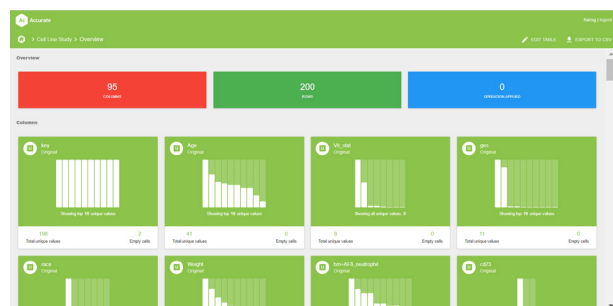

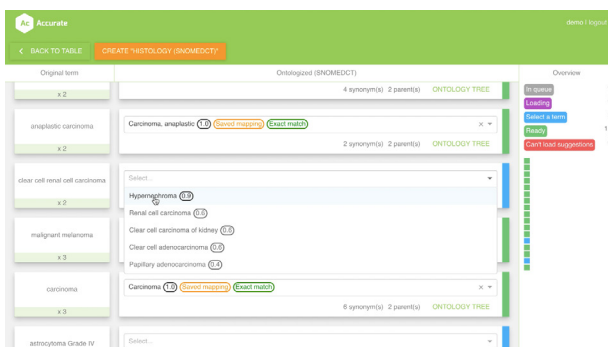

# Powerful, secure and easy-to-use

**MediSapiens has packed Accurate's innovative technologies and features into a powerful and easy-to-use solution that you can securely run in your web browser or mobile device.**

The solution is designed for any individual, team or organization that generates proprietary clinical or phenotypic data or uses publicly available clinical and phenotypic datasets.

Accurate can be deployed on the server of your choice, such as your own private server clusters or private clouds, giving you full control over data residency and data security. It can also be accessed online.

The solution is designed to integrate effortlessly with MediSapiens' data management, data interpretation and digitization solutions. It is also built to work with any preferred downstream data platform via a convenient CSV-format data export function.
