MediSapiens

Turning data into knowledge

The amount of biomedical data is growing exponentially, and the main challenge is to extract value from this data. Whether you work in health-care, life sciences or in the pharmaceutical field, you are faced with large amounts of data from multiple sources and formats.

MediSapiens provides industry leaders with novel IT solutions to make sense out of and combine all these biomedical data sources. Finding new insights becomes faster and more cost efficient.

MediSapiens has an 11-year track record providing international clients with innovative IT solutions.

With a mix of bioinformaticians, geneticists and IT professionals, your needs and requirements are fully understood from the beginning.

Clients include Bayer Pharma, Mars, national genomic programs and the largest Nordic private healthcare provider.

MediSapiens

What do we do?

Examples of our IT solutions include:

• Providing Bayer Pharma a unique multi-omics solution, enabling them to combine all their genomic and clinical data, for faster evidence-based drug discovery.

• Creating the world's largest genomic testing solution for pure-breed cats and dogs with Mars Petcare, enabling repetitive personalized health services.

• Supporting the largest private healthcare provider in the Nordics to use its genomic data together with its EHR data for personalized, preventive healthcare solutions.

How do we do it?

With our IT solutions you can combine and utilize all your data sources together, finding valuable insights efficiently.

Accurate™ ensures that your data is standardized, always fit for purpose and with highest quality yet lowest effort. Time-savings of 80% or more can be expected.

Genius™ helps you turn data into knowledge, giving you a multitude of options to query and analyze all your data under one single roof, whether it is small cohorts of patients to the UK Biobank and bigger.

MediSapiens has implemented biomedical IT solutions for over a decade. Our solutions support personalized health, drug discovery and genomic businesses.
